General Description:

This topical product is often used to assist with wound healing and to prevent or treat superficial skin infections. These products often have a combination of ingredients and are available in different formulations such as topical sprays, mousse, flushing solutions or pads.

What is this product?

A combination product that may contain any of the following ingredients:

Antiseptics reduce the amount of microorganisms on the skin and assist with skin health

Common antiseptics include:

Chloroxylenol

Chlorhexidine

Boric acid

Acetic acid

Antifungals have activity against yeast and fungi

Common antifungals include:

Ketoconazole

Miconazole

Tris EDTA (tromethamine edetate disodium dihydrate) helps to manage appropriate skin pH

Phytosphingosine encourages skin repair, improves skin health, has anti-inflammatory and antimicrobial activity

May include various moisturizers to improve the skin barrier and promote skin health

Many topical products are available without a prescription (OTC/over the counter) but should only be used under the supervision of your veterinarian

Applied directly on a localized area of the skin

Reasons for recommending:

Used topically to promote wound healing and to prevent or treat infections of minor irritations, scrapes, wounds or laceration

Animal Precautions:

This topical product is labeled for use in cats and dogs and should be administered only when and as prescribed by a licensed veterinarian

Use of this product in any other species should be in consultation with a veterinarian

Seek veterinary advice for any significant wounds/cuts/injuries as they may require more appropriate attention and the addition of other products or medications to prevent infection and promote healing

Antiseptic + Antifungal Topicals may not be effective against widespread or generalised infections

Animals with a known hypersensitivity or allergy to this or related products should not be given this medication

Directions:

Read and follow the product label carefully.

Antiseptic + Antifungal Topicals are often applied liberally to assist with cleaning a localized skin infection and to assist with managing local wounds, abrasions or lacerations.

Use the amount recommended and only as often as directed. Use this product for as long as your veterinarian directs. Do not skip doses or stop using this product without consulting your veterinarian. Missed applications may reduce the effectiveness of therapy. The frequency and length of use of this product depends upon the condition being treated and your animal's response to treatment.

Discuss with your veterinarian if you should clean the affected area prior to applying this topical product. It may be necessary to clip the hair around the affected area to assist with the treatment of the skin infection.

Discuss with your veterinarian if you should apply any bandaging after applying this topical product to the affected area.

Do not allow your pet to lick or ingest this product after application. Ingesting this product could be harmful. Avoid getting this topical product in your pet's eyes, nose or mouth.

If treating a potentially contagious skin condition, consider using gloves to apply the topical product and consult with your veterinarian about further measures to avoid spreading the infection.

Always wash your hands before and after applying any topical medication.

If you are having difficulty applying this product or your pet is in discomfort, contact your veterinarian.

This medication will take effect quickly, in about 1 to 2 hours, but its effects may not be visibly noticeable for a few days.

Ideally, utilize this product at the same time(s) daily.

What if a dose is missed?

If a dose is missed, give it as soon as you can. If it is time already for the next dose, skip the missed dose and go back to the normal schedule. Do not give two doses at the same time.

What to tell/ask a veterinarian before giving medication?

Talk to your veterinarian about:

When your pet will need to be rechecked

What tests may need to be performed prior to and during treatment with this product

What are the safety concerns when using this product in different species

What are the risks and benefits of using this product

Tell your veterinarian about:

If your pet has experienced side effects on other drugs/products

If your pet has experienced digestive upset now or ever

If your pet has experienced liver or kidney disease now or ever

If your pet has experienced any other medical problems or allergies now or ever

All medicines and supplements that you are giving your pet or plan to give your pet, including those you can get without a prescription. Your veterinarian may want to check that all of your pet’s medications can be given together.

If your pet is pregnant, nursing or if you plan to breed your pet

Storage and Warnings:

Antiseptic + Antifungal Topicals should be stored in a childproof container in a cool, dry place at room temperature away from heat and direct sunlight.

For external animal use only.

Avoid getting it in your animal's eyes or on their mucous membranes.

Wash hands after use.

Keep this and all medication out of reach of children and pets.

Call your physician immediately if you accidentally take this product.

Potential side effects:

If you notice anything unusual including any signs of skin irritation, redness or a rash, contact your veterinarian

This short-acting medication should stop working within 24 hours

Can this product be given with other drugs?

Avoid applying other topical medications to the same area as it may affect absorption

Do not give new food or medications without first talking to your veterinarian

If your pet experiences any unusual reactions when taking multiple medications, contact your veterinarian

What should I do if I know of or suspect there has been an overdose?

Contact your veterinarian immediately if you pet has accidentally ingested this medication or has received more than the prescribed amount.

What else should I know?

Notify your veterinarian if your animal's condition does not improve or worsens despite this treatment.

As with many products, Antiseptic + Antifungal Topical should only be utilized for the condition for which it was recommended, at the recommended amount, as directed by your veterinarian. Never use topical skin products in the eyes or ears.

This is just a summary of information about Antiseptic + Antifungal Topical. If you have any questions or concerns about this product or for the condition it was recommended, please contact your veterinarian.
